Three-point resection

0. Get the mean angle of two rounds:

  - A: 144-47-37
  - B: 34-59-1
  - C: 19-8-43

1. From the known coordinates of A, B, and C calculate lengths a and c, and angle α at station B.

  - c: 41.7350262608734
  - a: 6.963461782748601
  - alpha: 169-4-12

2. Subtract the sum of angles x, y, and α in figure ABCP from 360° to obtain the sum of angles A + C

  - A+C: 65-16-53

3. Calculate angles A and C using the following:

  - A: 22-50-21
  - C: 42-26-31

4. From angle A and azimuth AB, calculate azimuth AP in triangle ABP. Then solve for length AP using the law of sines, where α_1 = 180° - A - x.Calculate the ∆E and ∆N of AP followed by the coordinates of P.

  - AP: 32.627620918129494
  - azimuthAB: 12-24-10
  - azimuthAP: 35-14-31
  - azimuthAP: 160-53-25
  - **P1: [836537.5406955964, 818647.9981603324]**
  - deltaE: 26.647695596272634 deltaN: 18.827160332497133

5. In the manner outlined in step 4, use triangle BCP to calculate the coordinates of P to obtain a check.

  - CP : 21.70329093140128
  - azimuthBC: 203-19-57
  - azimuthCP: 160-55-6
  - **P2: [836537.5406955964, 818647.9981603324]**
  - deltaE: -20.507304403638898 deltaN: 7.1051603324300645

Leveling

- Given the (arbitrary) RL of BM11 as 25.362 mpd.
- Result : 25.362 + 0.171 = 25.533 mpd.
